

ALEX CANIZARES

Jacksonville, FL | (904) 554-8914 | canizaresalex24@gmail.com | linkedin.com/in/canizaresalex | github.com/alexcm24

SUMMARY

Software engineer building production full-stack and backend applications. Maintains a Next.js/TypeScript application used daily by a real client and built and deployed `pylot.run`, an e-commerce audit platform backed by 105 automated tests and CI. Works across Python, Java, and TypeScript.

PROJECTS

Pylot | AI Readiness and Visibility Audit for E-commerce Stores - `pylot.run`

Python, FastAPI, Celery, Redis, PostgreSQL, Docker

- Built a FastAPI service that queues store crawls to Celery workers over Redis; workers render product pages with Playwright, score their Product JSON-LD, and save reports to PostgreSQL. Deployed on Railway with infrastructure defined in code.
- Wrote 105 pytest backend tests covering SSRF and URL validation, rate limiting, and scoring logic; ran tests and linting on pull requests through GitHub Actions CI.

AuraJewel | Production Web Application for a Jewelry Retailer

Next.js, TypeScript, Supabase, PostgreSQL, Vercel

- Worked directly with the client across requirements, development, testing, deployment, and ongoing maintenance, delivering authentication, ticketing, printable receipts, and transactional email for an application used daily.
- Implemented PostgreSQL row-level security for tenant isolation and ticket-tracking workflows that eliminated recurring manual administrative work.

Stockseer | Full-Stack Stock Price Prediction Web App

Next.js, TypeScript, FastAPI, scikit-learn, Tailwind CSS, Recharts

- Built a full-stack app that trains a linear regression model on two years of historical closing prices to forecast next-day stock prices, integrating the Twelve Data API for ticker search and historical OHLC data.
- Developed a Next.js and TypeScript frontend with debounced ticker autocomplete and an interactive Recharts area chart comparing actual vs. predicted closes, backed by a FastAPI backend deployed separately on Render.

TaskFlow API | Backend Microservice

Java, Spring Boot, PostgreSQL, REST, OpenAPI/Swagger

- Built a Java and Spring Boot REST API with separate controller, service, and repository layers backed by a normalized PostgreSQL schema.
- Defined the API contract with OpenAPI and Swagger UI, then tested every endpoint through a Postman collection covering both success and error paths.

EXPERIENCE

Apple Inc. | Apple St. Johns Town Center

Jacksonville, FL

Technical Specialist, Apr 2024 – Present | Specialist, Nov 2023 – Apr 2024

- Diagnose iOS and macOS software failures and hardware faults in a live service queue, resolving 4+ cases per hour.
- Ranked #1 on the store performance scoreboard and achieved a 100 NPS during my first quarter as a Technical Specialist.
- Reproduce technical issues, capture diagnostic logs, document clear repro steps, and isolate software versus hardware failures before resolution or escalation to Apple Engineering.
- Train technicians during shadow sessions on diagnostic workflows, issue isolation, and communicating technical findings clearly to customers.

EDUCATION

University of North Florida | B.S. in Computer Science

Expected Dec 2026

- Relevant Coursework: Algorithms, Data Structures, Systems Programming, Operating Systems, Databases
- Awards: 1st Place, UNF Computing Symposium 2025 – AeroAtlas, 45 teams.

TECHNICAL SKILLS

Languages: Python, Swift, Java, C, TypeScript/JavaScript, SQL, Bash

Testing & Automation: pytest, Postman, GitHub Actions CI/CD, API Testing, Integration Testing, Debugging, Issue Reproduction

Frameworks & APIs: FastAPI, Spring Boot, Next.js, Celery, REST APIs, OpenAPI/Swagger, scikit-learn, Tailwind CSS, React

Data & Infrastructure: PostgreSQL, Redis, Supabase, Docker, Git, Vercel

Generative AI & ML: OpenAI API, Gemini API, Perplexity API, DeepSeek API, LLM API Integration, scikit-learn

Spoken Languages: English, Spanish
