OBJECTIVE

Computer Science student at the University of North Florida (graduating Dec 2026) seeking a software engineering internship or new-grad role. Experienced in full-stack and backend development with Python, FastAPI, React, Next.js, and Spring Boot. Open to remote, on-site, or hybrid roles starting summer 2026, fall 2026, or spring 2027.

EDUCATION

University of North Florida | *B.S. in Computer Science*

Expected Dec 2026

Relevant Coursework: Data Structures, Algorithms, Systems Programming, Object-Oriented Design, REST APIs, Multithreading

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Swift, C, Shell/Bash

Frameworks & Tools: React, Next.js, Node.js, FastAPI, Spring Boot, Celery, Tailwind CSS, Docker, Git, CI/CD

Databases & Cloud: PostgreSQL, MongoDB, Redis, Supabase, AWS, Vercel, Render, Linux/Unix

PROJECTS

AuraJewel | *Production Web App for a Jewelry Retailer (Live in Production)*

Next.js, TypeScript, Supabase, PostgreSQL, Tailwind CSS

- Built and deployed a production web application for a jewelry retailer, featuring authentication, ticketing, printable receipts, and transactional email. Live and used daily for the client's operations.
- Architected the system for multi-tenancy using PostgreSQL row-level security for data isolation, and designed automated ticket-tracking workflows that reduced manual admin work.

Pylot | *AI Visibility Audit Platform (In Development)*

Python, FastAPI, Celery, Redis, PostgreSQL, Playwright, Docker

- Built a distributed web application that crawls e-commerce sites, extracts and scores structured product data, and queries multiple AI platform APIs to measure brand visibility.
- Architected an asynchronous processing pipeline with FastAPI, Celery, and Redis to offload heavy crawling and API jobs to background workers, persisting results to PostgreSQL.
- Containerized all services (API, worker, database, message broker) with Docker for consistent local and production environments.

AeroAtlas | *Personalized Travel Companion*

Node.js, TypeScript, Supabase, Vercel **1st Place / 45 Teams, UNF Computing Symposium 2025**

- Built a full-stack travel app that pulls real-time data from 3 APIs (OpenWeather, OpenStreetMap, flight search) to generate personalized itineraries.
- Implemented user authentication and row-level security with Supabase and JWT to keep user data private and secure.

Stockseer | *Real-Time Stock Prediction Platform (Live)*

Python, FastAPI, scikit-learn, Next.js, Render, Vercel

- Built a full-stack ML app that forecasts next-day stock prices using linear regression trained on ~2 years of market data, served through a FastAPI backend.
- Deployed the backend and frontend with a CI/CD pipeline and built an interactive React dashboard visualizing actual vs. predicted prices.

WORK EXPERIENCE

Technical Specialist | *Apple Inc.*

Nov 2023 - Present

- Diagnosed complex hardware and software issues across Apple's product line, consistently ranking #1 on the store's performance scoreboard with a perfect NPS score.
- Collaborated with Apple engineering teams to escalate and resolve critical technical issues, bridging communication between customers and backend teams.
- Translated technical problems into clear, non-technical language for customers, building communication skills used in cross-team environments.

LANGUAGES

English (fluent), Spanish (fluent)
